SHOHAIL AKTHAR

shohailak@outlook.com |8197515584 | Github | Linkedin |Portfolio

PROFESSIONAL SUMMARY

Computer Science graduate (B.E. CS) with strong foundations in Data Structures, Algorithms, and distributed system design principles. Experienced in building scalable REST APIs, database-backed backend services using FastAPI and PostgreSQL, and leveraging AI-assisted workflows to accelerate development. Adept at automated data pipelines, optimization, and delivering clean, secure, and production-ready code

WORK EXPERIENCE

DeepThought — Data & Automation Intern | Project Team Lead
Client: Escape Velocity | Jan 2025 – Jul 2025

Product Intelligence & Data Collection System | *Python, Selenium, BeautifulSoup, Pandas*

- Architected and optimized a robust, multi-stage Python data processing pipeline handling 70,000+ records across 300+ categories, focusing on high concurrency, efficient pagination, and resilient error recovery.
- Improved scraping workflows to handle dynamic pages and pagination, and used parallel execution to process large workloads, identifying 12,000+ unique brands and 10,300+ unique sellers.

API-Driven Data Enrichment & Automation Pipeline | JavaScript, Google Apps Script, HTTP/JSON, Google Sheets

- Developed automated RESTful data-enrichment workflows by integrating third-party APIs, utilizing JSON parsing, rate-limit management, and robust error logging to ensure reliable system execution.
- Implemented batch processing, pagination, retry handling, rate-limit management, resumable execution and error logging to improve workflow reliability.
- Optimized backend processing logic to reduce execution time for batch records from 15 minutes to ~1 minute, successfully scaling automated throughput to 5,000+ monthly leads.

PROJECTS

JobPilot — Job Intelligence REST API | Python, FastAPI, PostgreSQL, SQLAlchemy, Alembic, Pydantic

- Developed scalable REST API endpoints using FastAPI and Pydantic to validate, process, and handle high-volume job-posting data.
- Designed a modular, layered backend architecture implementing service and repository patterns with persistent PostgreSQL storage, ensuring application scalability.
- Utilized AI coding assistants (GitHub Copilot/Claude) to accelerate development, automate testing workflows, and implement database schema migrations using SQLAlchemy and Alembic.

SKILLS

Languages: Python, SQL, JavaScript SQL, C# (Concepts)| **Backend & APIs:** FastAPI, REST APIs, Pydantic, SQLAlchemy, Alembic | **Core CS & Design**: Data Structures & Algorithms (DSA), Distributed Systems, System Design, Scalability |**Databases & Tool**s: PostgreSQL, Git, GitHub, VS Code, Google Sheets | **Automation**: Selenium, BeautifulSoup, API Integration, Data Validation Code Reviews, Troubleshooting, Agile Methodologies
AI Tooling: GitHub Copilot, Claude, AI-Assisted Development

EDUCATION

Jain College of Engineering, Belagavi, Karnataka **CGPA: 8.3/10**
Bachelor of Engineering in Computer Science and Engineering Nov 2021 – Jun 2025
